Harish Rao Yadagiri

harishraoyadagiri.dev | GitHub | +1-737-420-1959 | harishraoyadagiri@gmail.com | Linkedin

Data professional with 4+ years of experience transforming complex operational and fleet-scale datasets into actionable reliability insights, supporting engineering decision-making through statistical analysis, predictive frameworks, data pipelines, and interactive dashboards.

SKILLS

Languages: SQL, Python (Pandas, NumPy, SciPy, Matplotlib), R
Databases & Cloud: MySQL, Oracle SQL, MongoDB, PostgreSQL, AWS (S3, EC2, Redshift), Azure, Databricks, Snowflake
Analytics & BI Tools: Tableau, Power BI, Looker Studio, Qlik, Excel
Tools: Git, VS Code, Jupyter, Docker, Ansible, Azure Data Factory, Flask, FastAPI, PySpark
Certifications: Generative AI Fundamentals (Databricks), **AI Associate** (Salesforce)

WORK EXPERIENCE

Tiruven Inc **Irving, TX**
Data Engineer *June 2025 – Present*

- Re-engineered file-based Alteryx workflows into scalable, cloud-native GCP pipelines using GCP dataform, reducing average workflow runtime from hours to under 10 minutes and enhancing system reliability.
- Developed automated KPIs and alerting systems to track data quality, schema changes, and freshness checks, ensuring early detection of anomalies and maintaining compliance with SLAs.
- Build and deploy a predictive framework in Python (Pandas, NumPy, SciPy) to model component-level health trends and identify key subsystem failure drivers, achieving 87% predictive accuracy and reducing manual analysis cycles by 35%; additionally implement automated data enrichment and normalization workflows to clean, standardize, and deduplicate enterprise records, improving downstream reporting accuracy by 30%.
- Define and maintain standardized entity schemas in SQL ensuring consistent definitions of core entities (Customer, Project, User) across Sales, Product, and Marketing data systems.
- Analyzed multi-terabyte fleet operational datasets using SQL and Python to uncover usage patterns and reliability drivers, presenting findings through interactive dashboards that informed leadership's engineering roadmap decisions.
- Partnered with engineering and product stakeholders to translate ad hoc business questions into structured analyses, delivering trend and cohort reports that shaped prioritization of reliability initiatives.
- Conducted exploratory statistical analysis (correlation, distribution, and anomaly detection) on sensor and telemetry data to surface actionable insights supporting cross-functional decision-making.

Wipro Ltd **Hyderabad, TS**
Software Engineer *August 2021 – July 2023*

- Engineered Python automation scripts to replace manual engineering workflows, cutting processing and reporting time by 25% and accelerating product delivery cycles across cross-regional engineering teams.
- Designed and deployed 15+ reusable data intake and validation frameworks in Python within an Agile team, standardizing data collection and quality checks across business units improving team efficiency by 20% and built Python-based API connectors with OAuth authentication and structured error handling ensuring reliable data ingestion into pipelines.
- Automated infrastructure provisioning using Bash and Ansible scripting, eliminating repetitive manual setup tasks and reducing new engineer onboarding time by 25%.
- Diagnosed and resolved 50+ high-severity defects in hardware-adjacent (MTL-P) environments via log stream analysis, reducing system downtime by 35%; authored technical documentation and trained 15+ engineers on tooling and Jira workflows.
- Conducted root cause analysis on production system failures, documenting findings to prevent defect recurrence and improve overall validation reliability across development stages.

INDEPENDENT PORTFOLIO PROJECTS

Climate Analysis Data Pipeline *October 2025*

- Built an end-to-end ETL pipeline using Python, dbt, and Streamlit to ingest, transform, and serve climate data across 11 US cities from the Open-Meteo API, applying a dimensional data model and automated quality checks to support large-scale analytics workflows.

Credit Score Predictor *February 2025*

- Built an end-to-end ML pipeline in Python (scikit-learn, Pandas) covering feature engineering, model selection, validation, and productionization achieved 93.7% prediction accuracy on held-out test data using decision tree modeling.

Bank Marketing Predictive Model *November 2024*

- Trained a classification model in Python on historical campaign data and client demographics to predict term deposit conversions model output enabled a targeted marketing approach that improved lead conversion rates by 25%.

EDUCATION

University of South Florida
M.S. in Business Analytics and Information Systems | GPA: 3.75 / 4.0 May 2025

Amrita Vishwa Vidyapeetham
B. Tech in Electronics and Communication Engineering May 2021
